

Unit 4 Study Guide

Skill	Description	Example								
Generalize a pattern	Recognize and extend a pattern using a drawing and a table of values. Describe the pattern. Write an equation for the pattern.	<div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="text-align: center;">  <p>Figure 1</p> </div> <div style="text-align: center;">  <p>Figure 2</p> </div> <div style="text-align: center;">  <p>Figure 3</p> </div> </div> <table border="1" style="margin-top: 10px; width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 50%;">Figure Number, n</th> <th style="width: 50%;">Figure Value, v</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">1</td> <td style="text-align: center;">2</td> </tr> <tr> <td style="text-align: center;">2</td> <td style="text-align: center;">4</td> </tr> <tr> <td style="text-align: center;">3</td> <td style="text-align: center;">6</td> </tr> </tbody> </table> <p style="margin-top: 10px;">As the figure number increases by 1, the figure value increases by 2. The pattern is: multiply the figure number by 2 to get the figure value. An equation is: $v = 2n$</p>	Figure Number, n	Figure Value, v	1	2	2	4	3	6
Figure Number, n	Figure Value, v									
1	2									
2	4									
3	6									
Linear relations	The points on the graph of a linear relation lie on a straight line. To graph a linear relation, create a table of values first. In a linear relation, a constant change in x produces a constant change in y .	<table border="1" style="display: inline-table; margin-right: 20px; border-collapse: collapse;"> <thead> <tr> <th style="width: 30px;">x</th> <th style="width: 30px;">y</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">2</td> <td style="text-align: center;">0</td> </tr> <tr> <td style="text-align: center;">-1</td> <td style="text-align: center;">1</td> </tr> <tr> <td style="text-align: center;">0</td> <td style="text-align: center;">2</td> </tr> </tbody> </table>  <p>As x increases by 1, y increases by 1.</p>	x	y	2	0	-1	1	0	2
x	y									
2	0									
-1	1									
0	2									
Horizontal and vertical lines	A vertical line has equation $x = a$ A horizontal line has equation $y = b$	 <p>The graph of $x = 2$ is a vertical line. Every point on the line has x-coordinate 2. The graph of $y = -1$ is a horizontal line. Every point on the line has y-coordinate -1.</p>								
Interpolation and extrapolation	When we estimate values between 2 given points on a graph, we use interpolation. When we estimate values beyond given points on a graph, we use extrapolation.	 <p>When $y = 3$, $x = 1$ Extend the graph to find that, when $x = 3$, $y = 5$</p>								

Unit 4 Review

4.1 1. This pattern continues.

a) Draw the next 2 figures in the pattern.

b) Complete the table of values.

Figure Number, n	Number of Squares, s
1	1
2	4
3	7
_____	_____
_____	_____

c) Describe the patterns in the table.

The figure number increases by _____ each time.

The number of squares increases by _____ each time.

d) Write an equation that relates the number of squares to the figure number.

$$s = ___ n - ___$$

e) What is the number of squares in figure 10?

When $n = 10$:

$$s = ___ - 2 = ___ - 2 = ___$$

There are _____ squares in figure 10.

2. The pattern in this table of values continues.

a) Complete the table.

b) Which expression below represents the number of squares in terms of the figure number? _____

i) $5n$

ii) $5n - 4$

iii) $n + 4$

iv) $n - 4$

Figure Number, n	Number of Squares, s
1	5
2	6
3	7
4	_____
5	_____

4.2 3. Complete each table of values.

a) $y = x + 1$

x	y
1	___
2	___
3	___
4	___

b) $y = x - 1$

x	y
2	___
4	___
6	___
8	___

4. On his first birthday, Hayden was given \$20 by his grandfather. Each year's gift is \$10 more than the year before. The data is given in the table below.

Grandfather's Gifts

Birthday, n	Gift, g (\$)
1	20
2	30
3	40
4	50

a) Graph the data.

b) Is the graph linear? Explain your thinking.

The points _____, so the graph is _____.

c) Should the points be joined? Explain why or why not.

d) How are the patterns in the table shown in the graph? In the table, as the birthday increases by _____, the gift value increases by _____. Each point on the graph is _____ and _____ from the previous point.

4.3 5. Write an equation to describe each line.

6. Does each equation represent a horizontal line, a vertical line, or an oblique line?

a) $x = 2$

b) $y = 2x + 2$

c) $y = 3$

d) $x = -1$

Draw a graph for each equation above.

x	y

4.4 7. Which equation describes the graph?

$y = 2x$ or $y = -2x$

Fill in the tables of values.

x	$y = 2x$
-1	$2(\underline{\quad}) = \underline{\quad}$
0	$2(\underline{\quad}) = \underline{\quad}$
1	$2(\underline{\quad}) = \underline{\quad}$

x	$y = -2x$
-1	$-2(\underline{\quad}) = \underline{\quad}$
0	$\underline{\quad} = \underline{\quad}$
1	$\underline{\quad} = \underline{\quad}$

From the tables:

$y = 2x$ has points $(\underline{\quad})$, $(\underline{\quad})$, and $(\underline{\quad})$.

$y = -2x$ has points $(\underline{\quad})$, $(\underline{\quad})$, and $(\underline{\quad})$.

The graph passes through the points $(\underline{\quad})$, $(0, 0)$, and $(\underline{\quad})$.

So, $y = \underline{\quad}$ describes the graph.

8. Which graph represents the equation $x - y = 2$?

For $A(-2, 0)$:

Left side: $x - y =$ _____ Right side: _____
 $=$ _____

The left side _____ equal the right side.

For $C(0, -2)$:

Left side: $x - y =$ _____ Right side: _____
 $=$ _____

The left side _____ the right side.

For $D(2, 0)$:

So, Graph _____ has equation $x - y = 2$.

4.5 9. This graph shows Emma's and Julianna's journey from Saskatoon to Prince Albert.

When Emma and Julianna have travelled 100 km, about how far do they still have to go?

Journey from Saskatoon to Prince Albert

10. This graph represents a linear relation.

a) Estimate the value of y when:

i) $x = 0$ _____ ii) $x = 1$ _____

b) Estimate the value of x when:

i) $y = 4$ _____ ii) $y = -2$ _____
